

At Haughley Block Plant Ltd we recognize that transport has environmental impacts- these can arise from delivering services or distributing goods and products to clients and staff travelling to and from work. A green transport policy sets out the organization's aims and intentions to reduce those impacts and improve transport performance overall.

The general aim of this policy is to reduce the environmental impacts from transport and improve performance by minimizing noise, congestion, and disruption to others.

The objective of the policy is to minimize pollution and improve vehicle efficiency.

We will seek to minimize the environmental impact of our delivery and distribution operations by:

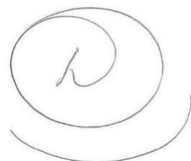

- Maximizing the efficiency of our transportation routes through improved logistics and flexible delivery methods
- Incorporating environmental performance objectives into all transport operations including the use of eco friendly efficient fuels such as HVO
- Maintaining all fleet vehicles to higher than minimum standards
- Ensuring transport movements in and out of our facilities are optimized and consistent with general traffic movements and noise levels.
- Training employees, including haulers, in safe and efficient driving programs
- Moving to a new vehicles and energy sources as soon as operationally and functionally viable
- Working with suppliers and contractors to support our green transport policies.

Transport plans and travel plans deal specifically with setting objectives and targets to reduce the impact of personal travel and creating systems and projects to encourage the use of more environmentally friendly personal transport.

We aim to achieve this by:

- Encouraging travelling by public transport where possible
- Encouraging walking and cycling to work
- Providing recharging points for battery electric vehicles
- Minimizing impervious hard standing in car parks and elsewhere, reducing the risk of surface water flooding.
